

A Regenerative Future Mangarara –The Family Farm

MANGARARA

- THE FAMILY FARM & ECO LODGE -

A group of people, including adults and children, are walking away from the camera on a grassy hillside. They are heading towards a dense forest in the background. The scene is bright and sunny, with green grass and trees. A wooden fence is visible on the right side of the path.

We cannot solve our problems with the same thinking we used when we created them

Our Land and Water – National Science Challenge

Our vision for the future

Catchments contain mosaics of land uses that are more resilient, healthy and prosperous than they are today.

All New Zealanders can be proud of the state of our land and water and share economic, environmental, social and cultural value from them.

How do we reach this future?

By finding new, fundamentally different ways of thinking and interacting with land and water.

Building clear transition pathways to impact.

By making changes quickly – starting now.

Through industry and community collaboration – working together for change.

REGENERATIVE AGRICULTURE

- enriches soils
- increases biodiversity
- improves watersheds
- resilience to climate instability
- higher health and vitality for farming communities
- reducing reliance on off farm inputs.

Principles of Soil Health

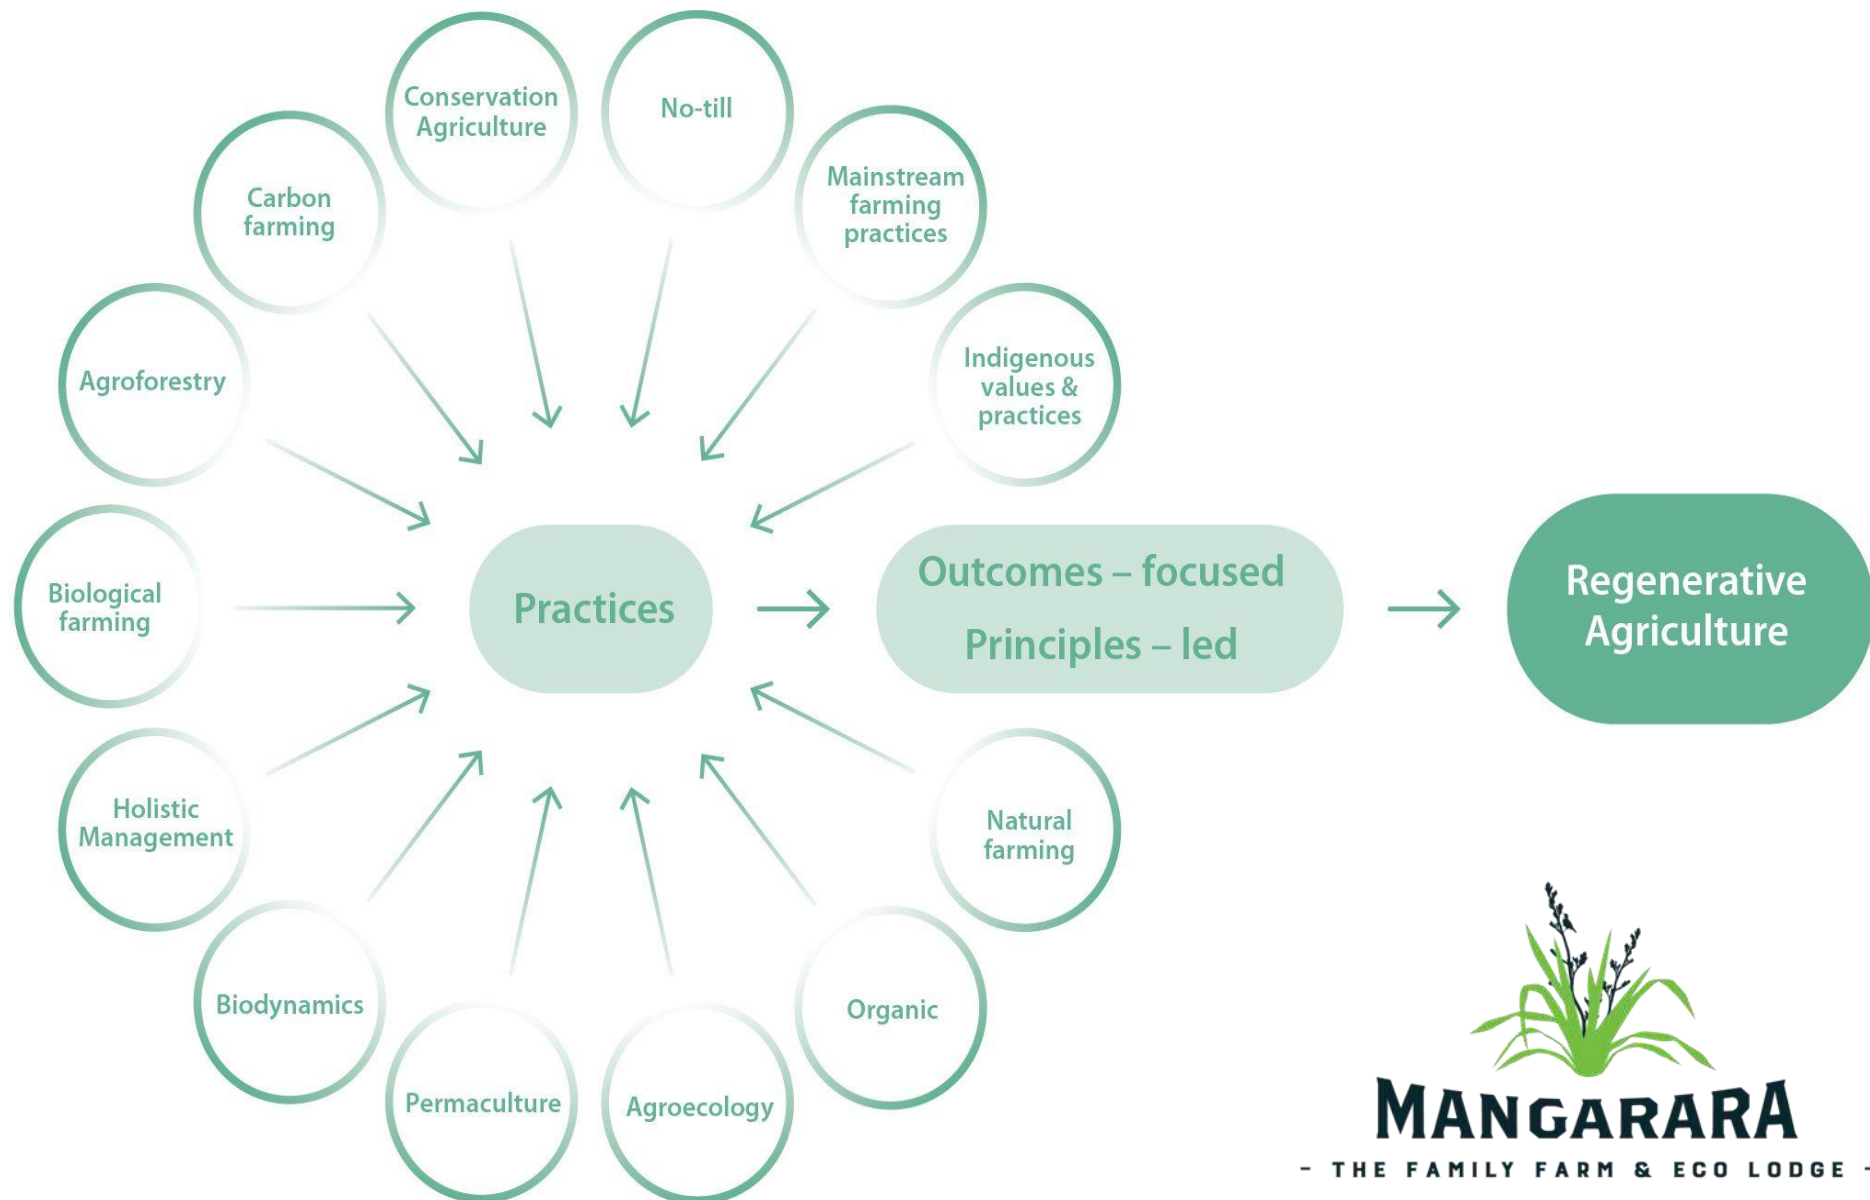

- The Farm is a Living System
- Limit disturbance
- Armour the soil surface
- Build diversity
- Keep living roots in the soil
- Intergrate animals
